Dear sir or madam:

Thank you for taking the time to review my application for **Junior Front-End Developer**. Allow me to tell you a little about myself.

I am a Mental Health technician and a *proud U.S. Citizen* who has 5 years of experience working the healthcare industry. Over the last few years, I've become well acquainted with the nuances of collaborating in a highly technical field.

Though I have the utmost reverence for my work in healthcare, I feel that it's time to take on new challenges. My passion lies in problem solving, so I'm switching gears to pursue web development. I am currently devouring everything Javascript with the end goal of becoming a well-rounded Full Stack Developer who is proficient in both the React and Angular frameworks.

When it comes to coding, I am incredibly driven. My educational journey has taken me from the fundamentals of programming (Python), to the tentpoles of web development (HTML5, CSS3, Javascript) to the supersets of those technologies (Sass, SCSS, JSX, Typescript), to those frameworks that supercharge our abilities (jQuery, Bootstrap, React), and beyond.

I like to spend a lot of time working on personal projects as well as contributing code to open source initiatives such as Biopython and the Processing Foundation. If you'd like to see examples of my work, please visit my website at **https://www.adil-iqbal.com** or my github at **https//www.github.com/Adil-Iqbal**.

I understand that the selection process for a new team member can be difficult at times. Hang in there! I'm sure you will find the right people for the job. I would be absolutely thrilled to be among those invited for a personal interview.

Sincerely,

Adil S. Iqbal
